

EV Infrastructure Summit

Chairperson Address - Day 2
Steve Lewis

Welcome to Day 2

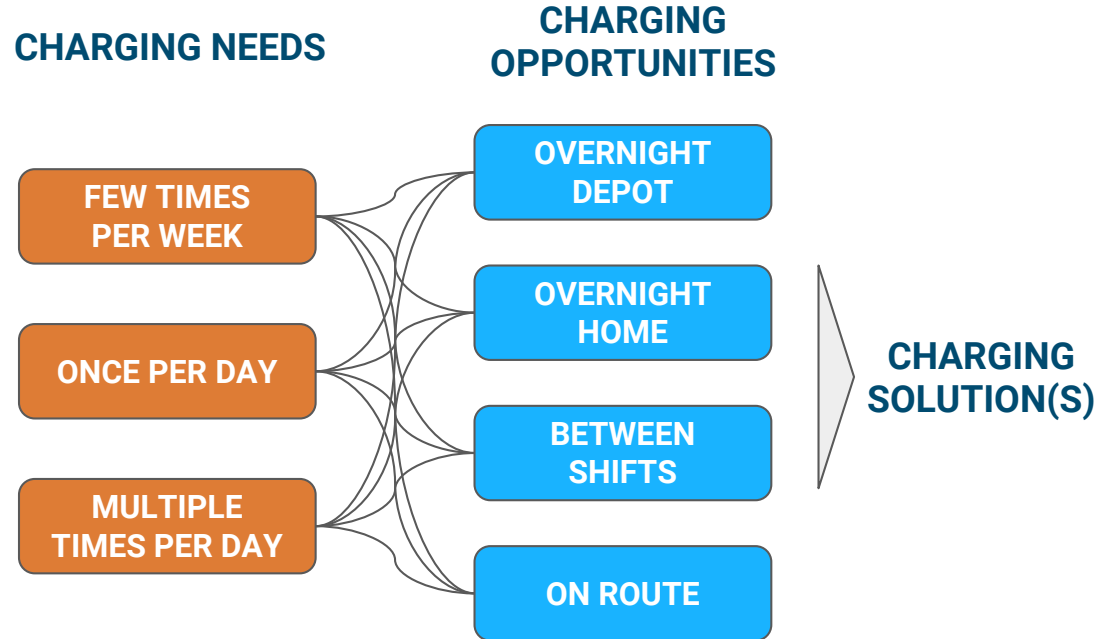

- Yesterday was about apartments and other common properties
- Today turns the focus to what fleets operators need
- Challenge for today is the number of different fleet types and needs exist
- Today we will hear from different fleet operators and experts and hopefully learn more on the nuances and common solutions different operators need

Different Fleet Types = Different Solutions

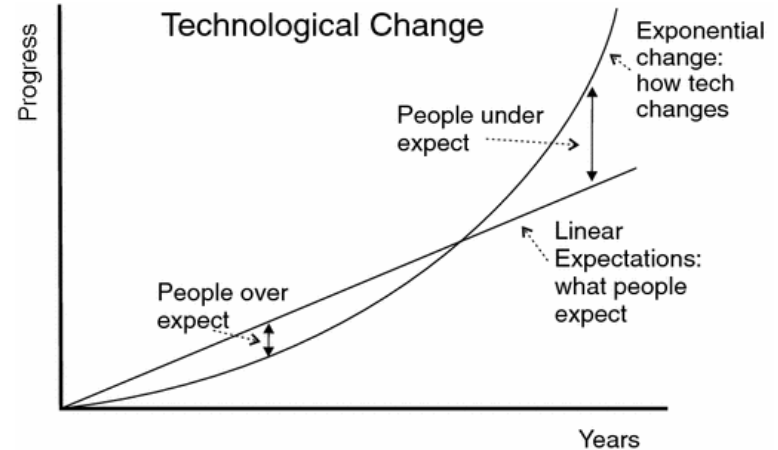

What are the charging needs and opportunities for the fleet?

- Telematics is ideal
- Fuel data
- Qualitative info from experts

What Does the Future Hold?

- Need to understand the long term needs
- The future solution will not evolve linearly
 - Battery technologies (range and charging speeds)
 - Charging technologies such as wireless
 - Autonomous vehicles
- Must ensure we consider this today, not to correctly predict the future, but to not overthink and let long term barriers delay what we can do now
